Ultra-E Prefilter

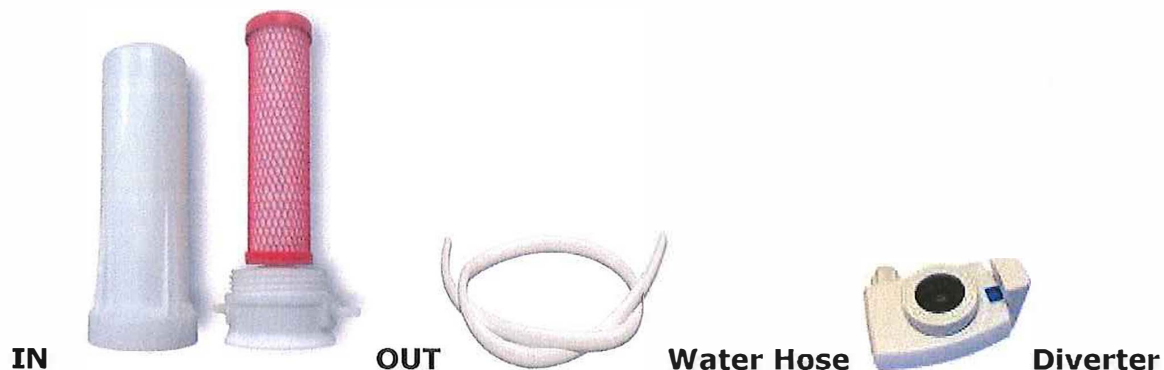

Enagic Customers

Hello, here is a brief explanation on how to set up the Ultra E.

On the bottom of the ultra e filter you will see "IN" and "OUT" on each side. The white water supply hose (connected to the SD501 machine) connects to the "OUT" side of the pre filter. (Note: remove the diverter from hose). The white hose that came with the Ultra E connects to the "IN" side of the pre filter. Make sure to connect the diverter to this water hose as well and you are set.

Important: Under-sink installation is not possible for the Ultra E filter.
